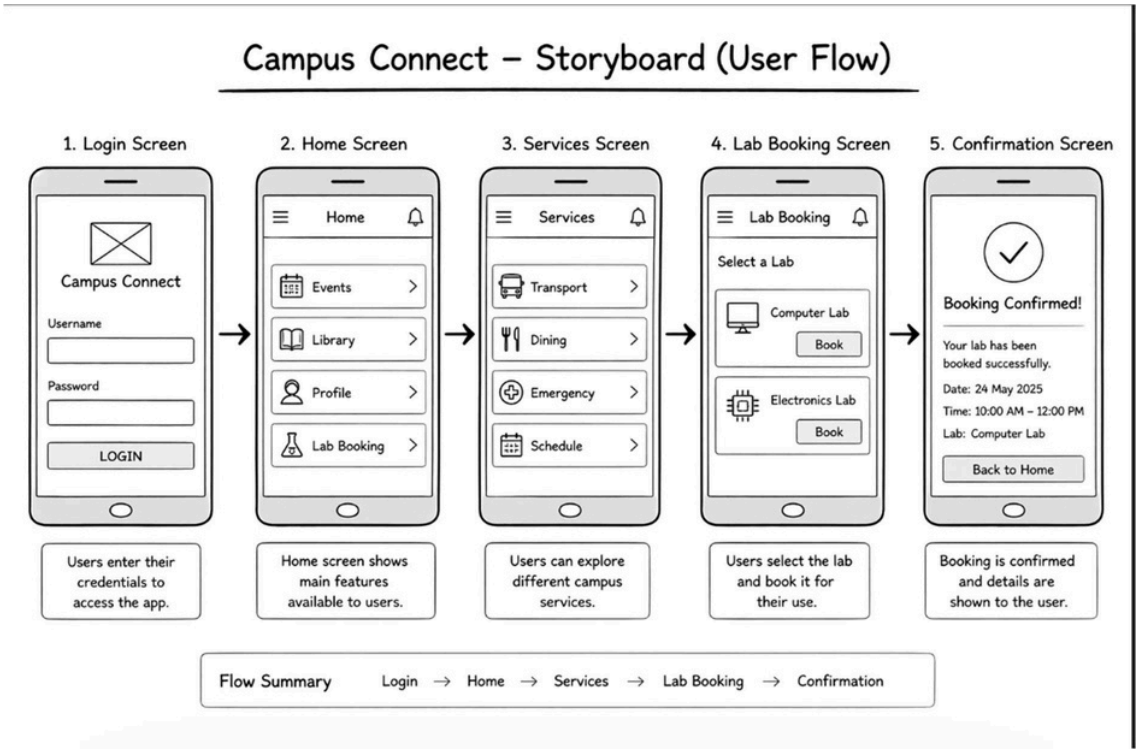
USER INTERFACE DESIGN

📖 Introduction & User Flow

Introduction

The Campus Connect App is a mobile application designed to help students access variouscampusservicessuch as events, library facilities, and lab booking. The application provides a simple and user-friendly interface for easy navigation and e icient service usage.

This storyboard is created using Balsamiq to represent the user flow in a low-fidelity wireframe format. It helps in visualizing how users interact with the application step by step.



Objective

- To understand user interaction in a mobile application

- To design a clear and structured user flow
- To represent application flow using wireframes
- To visualize the process of accessing and booking campus services

---

📌 User Flow Overview

The application flow consists of the following screens:

1. Login Screen
2. Home Screen
3. Services Screen
4. Lab Booking Screen
5. Confirmation Screen

📌 Flow Explanation

Login Screen

The login screen allows users to enter their username and password to access the application.

Home Screen

The home screen displays the main features such as Events, Library, Profile, and Lab Booking options, allowing users to navigate easily.

Services Screen

The services screen provides access to various campus facilities such as Transport, Dining, Emergency Contact, and Schedule.

Lab Booking Screen

This screen allows users to select and book available labs such as Computer Lab and Electronics Lab using the booking option.

Confirmation Screen

The confirmation screen displays a success message along with booking details such as date and time after completing the booking process.

꼲 Conclusion

The storyboard clearly represents the complete user flow of the Campus Connect application from login to booking confirmation. Using Balsamiq helps in understanding the application flow in a simple and structured manner without focusing on complex UI design.
