Experiment 4

Name :Hasha P Roll no : 240701187

Createa prototypewithfamiliarand unfamiliar navigation elements.Evaluateeaseofusewith different user groups using proto.io

This prototype represents a Ferrari car booking application where users browse cars, view specifications and complete booking. Each screen contains recognizable navigation patterns and some interpretative elements to test usability.

Your paragraph text

Purpose: Entryscreenoftheapplication

Screen 1 — Landing Page

Familiar Elements

1. ***Brand Logo (Ferrari Emblem) – Top Area***
   - Clearly indicates brand identity
   - Usersinstantlyrecognizethe application purpose
2. ***"SIGN IN" Button – Bottom Center***
   - Standardcall-to-actionbutton
   - Guides users to authentication process

Usability Observation

Users immediately understand they must log in to continue
No learning effort required

Purpose: Userauthentication

Screen 2 — Login Page

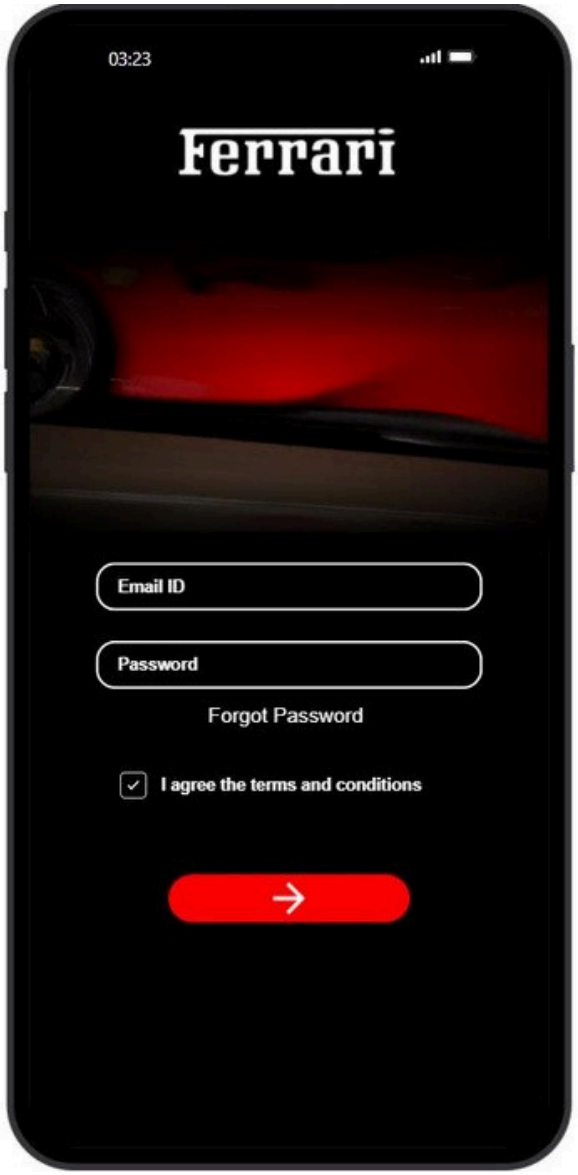
Familiar Elements

1. ***Email ID Field***
    - Standardtextinputforlogin credential
2. ***Password Field***
    - Secureauthenticationpattern
3. ***Forgot Password Option***
    - Expectedrecoveryfeature
4. ***Terms & Conditions Checkbox***
    - oCommonagreementconfirmation
5. ***Arrow Button (→)***
    - Represents proceedingto next screen

Usability Observation

Conventional login form improves learnability

Arrow instead of "Login" text requires slight interpretation



Purpose: Mainpromotionalscreen

Screen 3 — Home Page

Familiar Elements

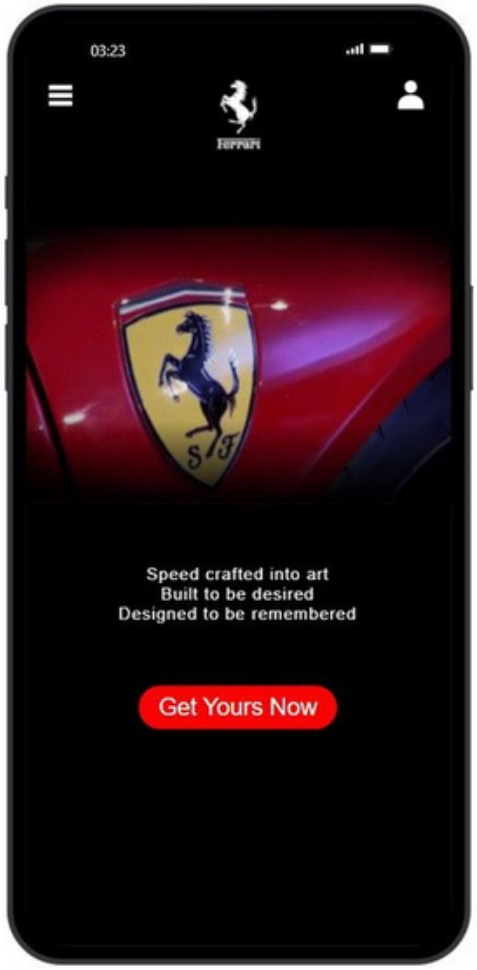
1. ***Hamburger Menu (≡) – Top Left***
    - Indicatesnavigationdrawer
2. ***Profile Icon – Top Right***
    - Represents user account access
3. ***Primary CTA: "Get Yours Now"***
    - Directsuser to explore cars

Possibly Unfamiliar

Promotional tagline instead of functional menu options
Users rely on button rather than navigation

Usability Observation

Visually appealing but action depends on CTA understanding



Purpose: Display available cars

Screen 4 — Car Listing Page

Familiar Elements

1. ***Scrollable Car Cards***
   - Common e-commerce browsing pattern
2. ***Back Arrow (←)***
   - Returns to previous page
3. ***Profile Icon***
   - Consistent navigation element

Usability Observation

Users naturally scroll to explore options
Minimal cognitive load

Purpose: Show specifications

Screen 5 — Car Details (Ferrari F80)

Familiar Elements

1. ***Back Arrow***
   - Returnnavigation
2. ***Specification Text Section***
   - Informational layout
3. ***"BOOK NOW" Button***
   - Primaryaction button

Usability Observation

Clear task: read → decide → book

Efficient decision-making flow

Purpose: Compareanothermodel

Screen 6 — Car Details (Ferrari SF90)

Familiar Elements

1. ***Car Image + Specs Layout***
   - Samepatternas previous screen
2. ***Book Now CTA***
   - Consistent action placement

Usability Observation

Consistency improves memorability
Users learn interaction after first car

Purpose: Finalselectionbefore purchase

Screen 7 — Car Details (Ferrari SP3)

Familiar Elements

1. ***Back Arrow Navigation***
2. ***Performance Specifications***
3. ***Book Now Button***

Usability Observation

Repeated layout reduces learning effort
Faster decision making

Purpose: Finalconfirmationafterbooking

Screen 8 — Booking Confirmation Page

Familiar Elements

1. ***Confirmation Message***
    - Providesfeedback of successful action
2. ***Brand Logo***
    - Reinforcestrust
3. ***Home Page Button***
    - Allowsnavigation back to start

Usability Observation

Provides closure and assurance
Clear end of task flow

Overall Usability Result

The prototype demonstrates:

Familiar navigation (buttons, back arrow, login fields) → quick understanding
Repeated layout → improved learnability
CTA-based navigation → minimal confusion
Branding elements → trust and clarity

Conclusion:

Users complete tasks efficiently because recognition-based UI reduces cognitive load compared tounfamiliar navigation patterns.
