Profile

Design Style

Cluttered layout with inconsistent spacing.

Icons and text feel mismatched, lacking visual hierarchy.

Navigation bar is overloaded with too many icons, making it confusing.

Content

Labels are vague (“Send anything Parcel”, “Spacious and Comfortable Scooty”).

No clear prioritization of services; everything competes for attention.

Search bar is generic (“Search”) without context.

Purpose

Tries to show multiple services at once but ends up overwhelming the user.

Focus is unclear — user doesn’t know what the app’s main function is.

Poor readability and weak guidance for first-time users.

GOOD DESIGN (Fairride)

Design Style

Clean, minimal layout with balanced spacing.

Consistent iconography and typography.

Navigation bar is simplified with clear categories.

Content

Labels are concise and meaningful (“Where are you going?”, “Metro Tickets”).

Services grouped under a clear section (“Everything in minutes”).

Favourites (heart icons) add personalization and usability.

Purpose

Guides the user toward the main action (booking a ride or parcel).

Prioritizes clarity and quick decision-making.

Creates a friendly, approachable interface that feels modern.

Key Differences:

1. Clarity vs Confusion

   Good design uses clear labels and hierarchy; bad design overwhelms with vague text and clutter.

2. Consistency vs Inconsistency

- Good design maintains consistent icons and navigation; bad design mixes styles and overloads the bottom bar.

3. User-Centered vs App-Centered

- Good design focuses on user needs (“Where are you going?”); bad design focuses on listing services without context.
